

Claude Code + Higgsfield Genjutsu · Mac · Windows

춤은 그대로, 주인공만 나로.

인스타 릴스 한 개와 내 전신 사진 한 장이면 됩니다. 동작, 카메라 움직임, 관객은 원본 그대로 두고 무대 위 주인공만 바꿉니다.

영상 받기	생성	재료	바뀌는 것
Claude Code	Higgsfield	영상 1 + 사진 1	주인공만

STEP 1 · 레퍼런스 릴스 받기 (Claude Code)

한 줄씩 ↵ 한 줄 복사 → 붙여넣기 → Enter. 다음 줄도 똑같이 통째로 ↵ 박스 전체를 한 번에 붙여넣고 Enter

맨 앞 번호는 빼고 입력하세요. 길어서 접혀 보여도 번호 하나가 한 줄입니다.

1 Claude Code 설치 (처음 한 번만)

내 컴퓨터에 맞는 쪽 한 줄만 입력하세요. 설치가 끝나면 창을 껐다 다시 여세요.

Mac · 터미널 — 한 줄씩 ↵

```
curl -fsSL https://claude.ai/install.sh | bash
```

Windows · PowerShell — 한 줄씩 ↵

```
irm https://claude.ai/install.ps1 | iex
```

윈도우에서 Git이 필요하다고 나오면 git-scm.com에서 Git for Windows를 먼저 설치한 뒤 다시 실행하세요.

2 다운로드 폴더에서 Claude Code 켜기

Mac · 터미널 — 한 줄씩 ↵

```
cd ~/Downloads
claude
```

Windows · PowerShell — 한 줄씩 ↵

```
cd $HOME\Downloads
claude
```

처음 켜면 브라우저가 열리며 로그인을 요청합니다. Claude 계정으로 로그인하면 돼요.

3 말로 시키기 (Mac · Windows 공통)

Claude Code 입력창에 — 통째로 ↵

```
이 인스타 릴스를 소리까지 포함해서 mp4로 받아줘. 내 컴퓨터에서 바로 재생되게 H.264로 바꿔줘.
https://www.instagram.com/p/...
```

링크만 내가 받을 릴스 주소로 바꾸세요. 도구 설치부터 다운로드, 변환까지 Claude Code가 알아서 합니다. 중간에 실행해도 되냐고 물으면 Enter(허용)를 누르세요.

Claude Code가 대신 실행하는 명령 참고용 · 직접 칠 필요 없음

도구 설치 · Mac

```
brew install yt-dlp ffmpeg
```

도구 설치 · Windows

```
winget install yt-dlp.yt-dlp
winget install Gyan.FFmpeg
```

받기 + 변환 · Mac · Windows 공통

```
영상과 소리를 받아 mp4로 합치기
yt-dlp -f "bv*+ba/b" --merge-output-format mp4 -o "insta_%(id)s.%(ext)s" "릴스 링크"

어디서나 재생되는 H.264로 변환
ffmpeg -i insta_ID.mp4 -c:v libx264 -crf 18 -c:a copy insta_ID_h264.mp4
```

인스타 원본은 VP9 코덱이라 맥 퀵타임이나 윈도우 기본 플레이어에서 안 열릴 때가 많아요. 그래서 H.264로 한 번 바꿉니다.

STEP 2 · 힉스필드 Genjutsu로 주인공 바꾸기

1. Higgsfield에서 **Genjutsu**를 엽니다.
2. 받은 릴스를 **Reference video**에 올립니다.
3. 내 전신 사진을 **Character Reference 1**에 올립니다.
4. 아래 프롬프트를 붙여넣고 생성합니다.

프롬프트

통째로 복사 → 힉스필드 프롬프트 칸에

```
Use the uploaded reference video as the exact reference for motion, choreography, timing, composition and camera.

MAIN CHARACTER: Replace only the single central performer with the person in Character Reference 1. Keep that person's face, hairstyle, skin tone, body proportions and outfit identical in every frame, and keep him clearly distinct from the crowd.

CROWD: Do not apply Character Reference 1 to anyone else. Keep the same number of people, their positions, spacing and depth. Do not add, remove, merge or duplicate people.

MOTION: Reproduce the original performer's exact poses, gestures, rhythm and timing. Do not invent new moves.

IDENTITY LOCK: The central face stays the same from the first frame to the last. No morphing, swapping or blending with background people.

CAMERA: Keep the original angle, lens, framing, shot scale and every camera move. Add no new zoom, crop, tilt or reframing.

SCENE & CONSISTENCY: Keep the original set, lighting, shadows and depth of field. Photorealistic skin, hands and fabric. No flicker, no outfit changes, no warped hands or limbs.

FINAL: Match the reference as closely as possible and change only the identity of the central performer.
```

- **MAIN** 무대 가운데 한 명만 내 사진으로
- **MOTION** 원본 동작·박자만, 새 동작 금지
- **CROWD** 관객 수·자리 그대로, 얼굴 복제 금지
- **CAMERA** 앵글·줌·구도 그대로

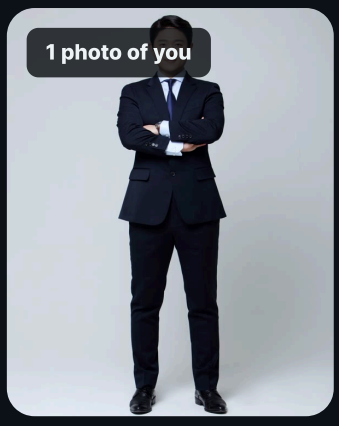

사진 고르는 요령

머리부터 발끝까지 나온 **정면 전신**, 얼굴이 선명한 사진이 가장 안정적입니다. 원본 주인공과 비슷한 구도일수록 얼굴이 덜 흔들려요. 이 예시는 정장 팔짱 사진 한 장으로 만들었습니다.

주의 · 남의 영상은 연습·참고용으로만 쓰고, 그대로 재업로드하지 마세요. 결과물을 올릴 땐 원작자를 표기하세요.

Claude Code + Higgsfield Genjutsu · Mac · Windows

Same moves. Starring you.

One Instagram reel and one full-body photo. The choreography, camera and crowd stay as they were. Only the lead on stage changes.

DOWNLOAD	GENERATE	INPUTS	CHANGES
Claude Code	Higgsfield	1 video + 1 photo	Lead only

STEP 1 · Get the reference reel (Claude Code)

Line by line ↵ Copy one line → paste → Enter. Repeat for the next line

All at once ↵ Paste the whole box, then Enter

Don't type the line numbers. A long line that wraps is still one line.

1 Install Claude Code (once)

Run only the line for your computer. When it finishes, close the window and open a new one.

Mac · Terminal — Line by line ↵

```
curl -fsSL https://claude.ai/install.sh | bash
```

Windows · PowerShell — Line by line ↵

```
irm https://claude.ai/install.ps1 | iex
```

If Windows says Git is required, install Git for Windows from git-scm.com first, then run the line again.

2 Start Claude Code in your Downloads folder

Mac · Terminal — Line by line ↵

```
cd ~/Downloads
claude
```

Windows · PowerShell — Line by line ↵

```
cd $HOME\Downloads
claude
```

The first time, a browser window opens and asks you to sign in with your Claude account.

3 Ask in plain words (Mac and Windows)

In Claude Code — All at once ↵

Download this Instagram reel as an mp4 with its audio, and convert it to H.264 so it plays on my computer.
https://www.instagram.com/p/...

Swap in your reel's link. Claude Code installs the tools, downloads and converts. If it asks to run a command, press Enter to allow it.

What Claude Code runs for you

Reference · no need to type

Install tools · Mac

```
brew install yt-dlp ffmpeg
```

Install tools · Windows

```
winget install yt-dlp.yt-dlp
winget install Gyan.FFmpeg
```

Download + convert · Mac and Windows

```
download video and audio as one mp4
yt-dlp -f "bv*+ba/b" --merge-output-format mp4 -o "insta_%(id)s.%(ext)s" "REEL LINK"

convert to H.264 so any player opens it
ffmpeg -i insta_ID.mp4 -c:v libx264 -crf 18 -c:a copy insta_ID_h264.mp4
```

Instagram often serves VP9 video, which QuickTime and the default Windows player may not open, so the last step converts it to H.264.

STEP 2 · Swap the lead with Higgsfield Genjutsu

1. Open **Genjutsu** on Higgsfield.
2. Upload the reel as the **Reference video**.
3. Add your photo as **Character Reference 1**.
4. Paste the prompt below and generate.

The prompt

Copy all → Higgsfield prompt box

```
Use the uploaded reference video as the exact reference for motion, choreography, timing, composition and camera.

MAIN CHARACTER: Replace only the single central performer with the person in Character Reference 1. Keep that person's face, hairstyle, skin tone, body proportions and outfit identical in every frame, and keep him clearly distinct from the crowd.

CROWD: Do not apply Character Reference 1 to anyone else. Keep the same number of people, their positions, spacing and depth. Do not add, remove, merge or duplicate people.

MOTION: Reproduce the original performer's exact poses, gestures, rhythm and timing. Do not invent new moves.

IDENTITY LOCK: The central face stays the same from the first frame to the last. No morphing, swapping or blending with background people.

CAMERA: Keep the original angle, lens, framing, shot scale and every camera move. Add no new zoom, crop, tilt or reframing.

SCENE & CONSISTENCY: Keep the original set, lighting, shadows and depth of field. Photorealistic skin, hands and fabric. No flicker, no outfit changes, no warped hands or limbs.

FINAL: Match the reference as closely as possible and change only the identity of the central performer.
```

`MAIN` Only the center performer becomes you

`CROWD` Same people, same spots, no cloned faces

`MOTION` Original moves and beat only

`CAMERA` Angle, zoom and framing untouched

Picking your photo

A clear, **front-facing full-body** shot works best. The closer its pose is to the original lead, the steadier the face. This example used one photo in a suit with arms crossed.

Heads up · Use others' videos for practice only. Don't re-upload them, and credit the creator.
